Cloud-Based Asbestos Registers

QR Codes

QR Codes make it simple to share important information to your employees and contractors such as an asbestos register.

QR Codes assist in meeting regulatory compliance, meaning you will be ready for your compliance audits.

Scan the QR Code to see our system

CLOUD-BASED
You can access your documents at the office or in the field, with a smart-phone or computer

REGULATORY COMPLIANT
Meets your duties under Regulations 229 & 237 in ensuring the asbestos register is readily accessible

DOCUMENT CONTROL
Meaning you can control the report version, ensuring the most recent report is used for planning and maintenance

How we use QR Codes

We use QR Codes to ensure your asbestos registers are always readily available.

We upload your asbestos registers to the QR Code which your employees and contractors can scan on-site.

Not only does this system make it easier for contractors to access the documents they need, but also decreases the time spent organising the asbestos register to be sent to your contractors.

The QR Code is established in a well-known area of the building, usually the essential services box or in the reception area.

Asbestos Portal

We provide you with unlimited access to an asbestos portal.

We upload asbestos registers, asbestos clearance certificates, master registers and air monitoring reports in one place, making data retrieval simple.

We can upload the documents you wish to see on your portal.
